

Abstract

Camera with Motorised Film Advancement

5 A camera (2) has a main body (4) defining a pair of film
chambers on opposite sides of an exposure opening (18)
comprising a first chamber (14) for receiving a film
cassette having a central spool to which film is secured
and a second chamber (16) for receiving a second film
container into which film is pre-wound prior to use, a
10 drive shaft having an end which extends into the first
chamber (14) for engaging the spool, an electric motor
(30) disposed between the chambers operably connected to
the drive shaft to drive the shaft in one direction, and
a shutter mechanism with a shutter release assembly
15 operably connected to the motor control.
